TERMS & CONDITIONS

SECTION 1: Programming Languages & Frameworks

1.1: Languages

The programming languages that will be in use, according to each Plan, are within the following:

1. HTML,
2. CSS,
3. JavaScript

Each language will be used and optimized for simplicity and beautification of the entire webpage/site.

1.2: Frameworks

Due to the increasingly large number of libraries and frameworks in use, only the following three will be used upon special request, using the Interactive Plan:

1. React.js,
2. Node.js,
3. Express.js

These programming languages and frameworks are the most used in real world situations. They help to beautify and make the webpages more interactive for greater user experience.

SECTION 2: DESIGNING THE WEBPAGE

2.1: Designing Tool

The online designing tool that will be used is Canva, and a webpage will be coded out through a template. Before finalizing, the client will be sent a design of how the webpage will look like, either in PDF or PNG/JPG format. The client can then provide feedback on how to improve the design, however, please note that not all feedback can be implemented and some parts may be left out.

SECTION 3: DEADLINES & RESULTS

3.1: Deadlines

The deadline for each website will be a minimum of ONE (1) MONTH and may increase with prior notice. Requesting the website at an earlier time (minimum of two (2) weeks) will require an extra fee.

3.2: Results & Confirmation

The resulting webpage will be sent in the form of a ZIP FILE through email. Inside this file, there will be all the images as well as the code in **.html** format to run on the client's device. The final result will NOT include a domain, and will only include the backbone for the front-end development.

In order to host the website with a domain/sub-domain, the client can request for the details on how to do so, and a recommended platform to host the code on will be sent in a PDF format through email. However, this process is done by the client themselves, and any usage of online payment will be completed by the client themselves.

After the website's ZIP file has been created, it is up to the client on what and how they want to use it.

This is only a one-time process, for any adjustments, the client will have to place a new order and it will be counted as an entirely new registration.

By submitting the Google Forms, you agree with the above policies and regulations
